### Lockheed Martin Claims Sustainable Fusion Is Within Its Grasp

By Wayne Rash | Posted 2015-03-04 [Email](#) [Print](#)

**NEWS ANALYSIS:** Lockheed Martin's Skunk Works claims the ability to generate cheap energy from nuclear fusion with little waste or global warming is within its grasp.

Imagine a source of electrical power that uses water for fuel, produces byproducts that are totally safe and releases no air pollution.

Then imagine that once it's up and running, it'll be so portable that an entire power plant could fit into the cargo hold of an airplane. Now, imagine that it'll be running in prototype form in five years and operating commercially in ten.

It sounds like science fiction, but it's not. However, it is being built by a group of scientists and engineers in a place that's legendary for doing what was thought to be impossible in a remarkably short amount of time. This place, which is part of Lockheed Martin's aeronautics business, is popularly known as the Skunk Works.

This is the same Skunk Works created by the near-mythical Kelly Johnson, an aerospace engineer able to head teams that built the SR-71 Blackbird reconnaissance jet years before any other organization even

Texas Department of Public Safety

**DIVISION OF EMERGENCY MANAGEMENT**

# LoneStar Basics

- LoneStar supports DDC level (Regional State) positions
  - DDC, Field Response TDEM, DSHS, TFS, TXDOT, etc.
- Gives Regional State personnel one server to log into vs 40+ servers
- Allows local servers to determine what and WHEN to give visibility
- Used to log incident information and requests for tracking and reimbursement
- Will eventually support Municipal level (City & County) access
  - “Fab 5” and more general boards i.e. STAR, ETN, Events, etc.
- “PIN” concept will allow local entities to process STARs without WebEOC accounts

# Field Activity Report

# What is a FAR?

- Field Activity Report
  - Used by the front-end users (DCs, IMTs) to provide real time information (push/place) of activities, events, incidents
  - Used by back-end users (SCs, SOC) to receive, monitor, track, information (pull/extract) to create various reports , sitreps, snapshots, etc.
  - Training for the FAR can be requested via your DCs

## “Place” - “Pull” Process

# STAR & Resource Tracking

# What is a STAR?

- State of Texas Assistance Request
  - Used by Local Jurisdictions, DDCs, IMTs to submit requests for assistance to include personnel, supplies and equipment
  - Can also be used at the SOC to activate and deploy at all levels
  - Once a STAR is created, Actions are tied to each request to meet the needs of that request. Each action is independent, and actions that have resources needing to be recovered (demob'd) can be tracked

# Assistance Request Process

Texas Department of Public Safety

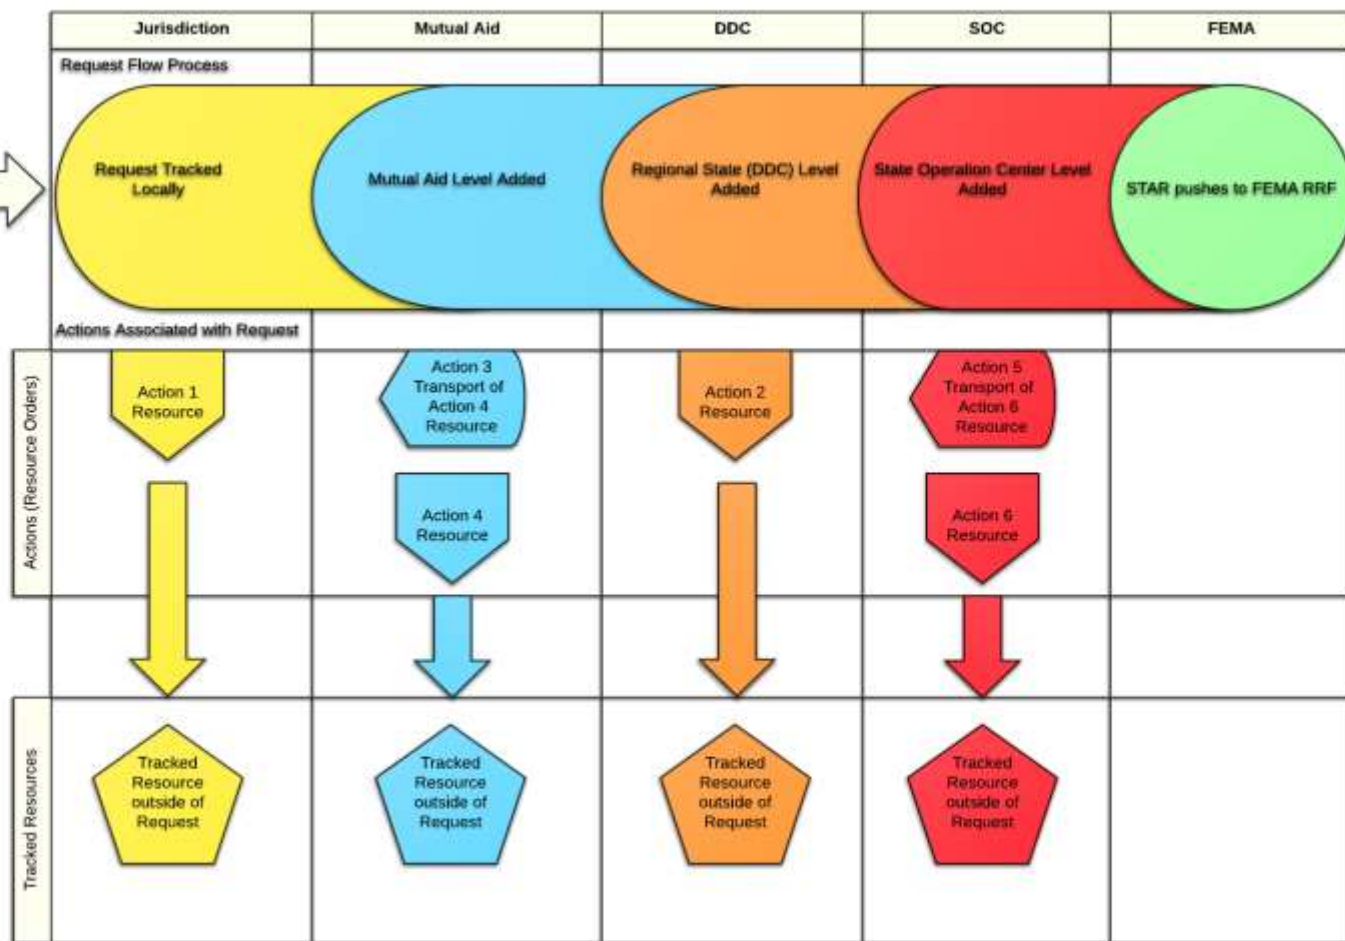

**DIVISION OF EMERGENCY MANAGEMENT**

# STAR Process Rationale

NOTE: Each 'level' will still have processes build into it IE at the DDC level there would be some basic routing to have a regional entity fill an action

Texas Department of Public Safety

**DIVISION OF EMERGENCY MANAGEMENT**

# STAR Process

---

- Allow for all STARs to be visible and tracked at every stage by everyone from requestor to filler(s)
- If STAR cannot be satisfied at current level, elevate to next
- One STAR may have multiple associated “actions”
- “Actions” may be trackable (demob) resources
- A STAR is the Request portion only; associated Actions can Fill, Send, Receive, Release, and Finally Demob Resources. (Note: Only SOC can Demob resources)
- Provides a consistent and accurate Reporting Process from Jurisdiction to DDC to SOC levels

---

## Upcoming Technology: “PIN” Concept

- PIN determines where STAR automatically pushes (no need for local to define route)
- After submission, WebEOC will email URL for STAR tracking / log
- Secure: PIN + specific STAR number to display
- Ease of use: PIN + email will display all associated STARS to email address
- PINs given to Cities\*, Counties\*, and DDCs
  - \*To receive STARS, cities and/or counties must have actual WebEOC accounts on a participating WebEOC server.
- Provides a consistent and accurate Resource Tracking Process from Jurisdiction to DDC to SOC levels without account support

# STAR Resource Tracking

---

- Allow for all resources generated from STARs to be visible and tracked at every stage by everyone from requestor to filler(s)
- Dashboard display shows all levels available and assigned resources
- Resources can be tracked outside of STARs
- Locals and DDCs release Resources
- Only SOC can demob Resources
- Provides a consistent and accurate Resource Tracking Process from Jurisdiction to DDC to SOC levels

## Emergency Tracking Network (ETN) in 2016

---

- Major reworking of what process and program will do
- Ease of use for sending and receiving jurisdictions to operate
- Wholly supported within TDEM CIS Section
- Can work with existing technology (EMTrack, AHRN, SNCA)
- Mobile friendly / capable
  - Camera
  - GPS

Texas Department of Public Safety

**DIVISION OF EMERGENCY MANAGEMENT**

# Emergency Tracking Network (ETN) in 2016

---

## Basic Steps of ETN Process

1. Embarkation Location Setup
  - a) Locations & Vehicle Creation
  - b) Enrollment of Evacuees, Pets, Durable Medical Goods
  - c) Place Evacuees onto Vehicles
2. Transport to Reception Centers
3. Shelter Location Setup
  - a) Locations Creation
  - b) Receive Vehicles
  - c) Shelter Counts by Type
    - i. Headcount for GenPop
    - ii. Per-person for Medical
4. Repopulation

## Final Comments

---

- Processes will drive solutions for incident specific needs as in Ebola.
- Standardized processes result in better communication paths.
- TDEM CIS has ability and capability to give state, regional and local interoperability. Use this resource!
